Satlynx Mobile

imagination at work

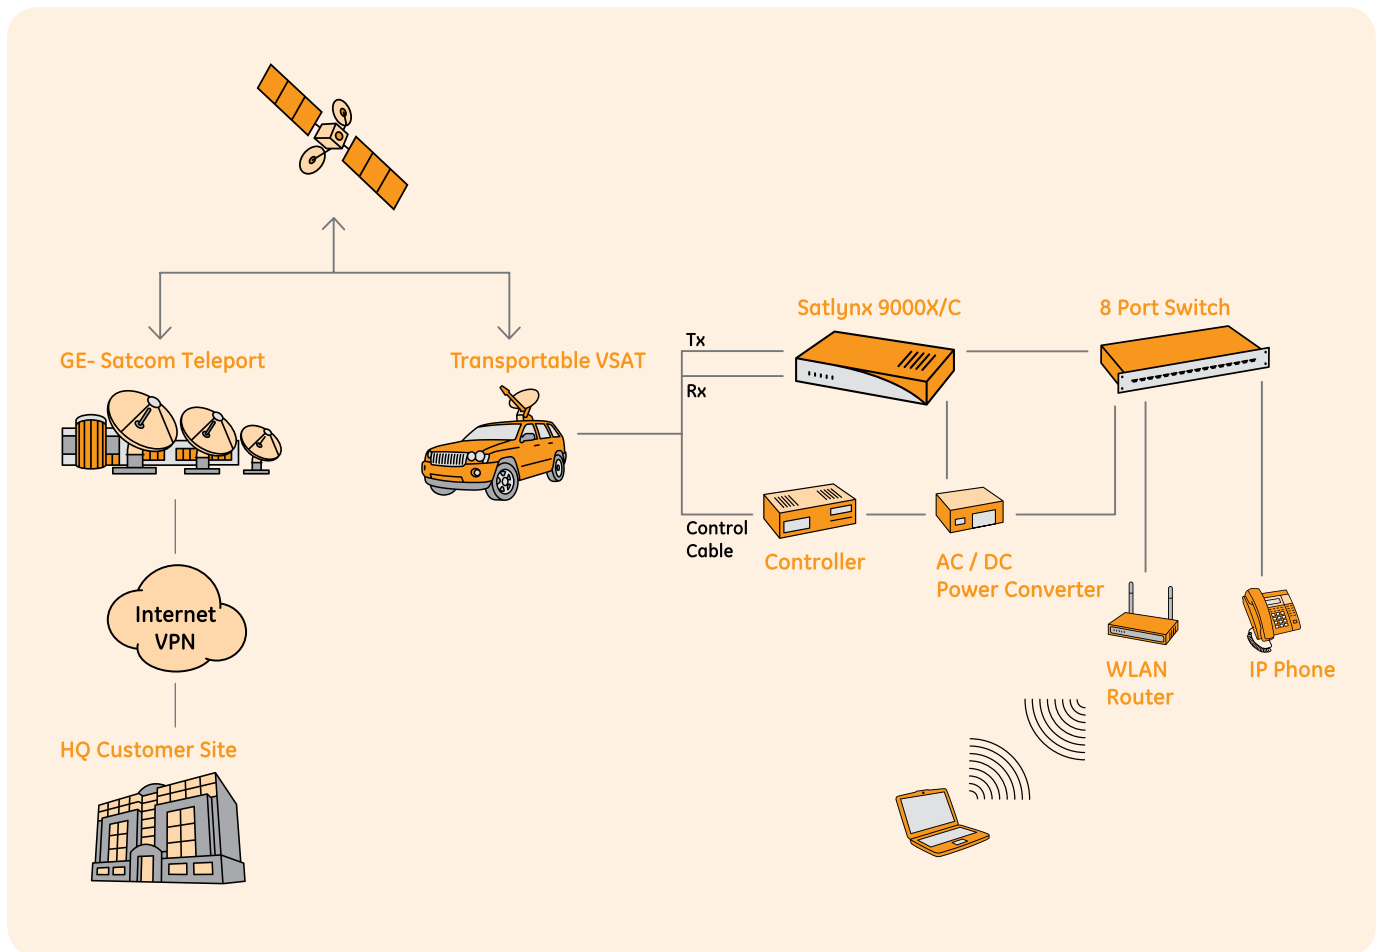

The Satlynx Mobile solution provides rapidly deployable broadband connectivity, ideal for emergency services, interim or tactical communications and event based connectivity requirements.

Incorporating a reliable auto-acquisition antenna in combination with any GE – Satcom modem, it can deliver instant connectivity virtually anywhere at anytime.

The Satlynx Mobile solution is available across all GE - Satcom VSAT platforms and can be deployed virtually anywhere. Designed for flexibility and ease of use, this robust and reliable antenna can establish broadband connectivity, from a fixed location, in less than 5 minutes after a single button push.

This satellite mobile solution can support a broad range of applications including Internet access, telephony, video conferencing and data communication, in different scenarios such as business continuity, emergency response, tactical field deployment and temporary usage.

Satlynx Mobile Experience

Regardless of our customers business background, they can experience an impressive degree of simplicity when setting up the Satlynx Mobile solution on their vehicle and freedom in choosing their uplink and downlink location spot, whether in urban or remote places. Satlynx Mobile is deployable for all customers facing last minute and emergencies situations, that require instant and robust connectivity.
